Liquidity Risk Management Policy
流動資金風險管理

Liquidity risk is the risk that the Branch is unable to meet its financial obligations in a timely manner at reasonable prices. Financial obligations include liabilities to counterparties, and lending and investment commitments.

Effective liquidity risk management is essential to maintain the confidence of counterparties, manage the Branch's cost of funds and to support core business activities, even under adverse circumstances.

Liquidity risk is managed within the framework of policies and limits that are approved by the Head Office. The Head Office receives reports on risk exposures and performance against approved limits. The Branch Asset-Liability Committee (ALCO) provides senior management overview and supervision of liquidity risk.

The Branch Risk Management Department sets several liquidity risk monitoring indicators to control liquidity risk effectively. The Branch Financial Trading Department is responsible for the daily cash flow execution and liquidity position adjustment to ensure appropriate liquidity. If the monitoring indicators become abnormal, each of them shall report to ALCO in time and escalated to Head Office if required.

The key elements of the liquidity risk framework are:

- Reporting – support the ALCO with analysis, risk measurement, monitoring and reporting for their oversight of all significant liquidity risks.
- Liquidity Maintenance Ratio (LMR) – The Branch's average LMR for the period is the simple average of each calendar month's average liquidity maintenance ratio, which is computed in accordance with the Banking (Liquidity) Rules under the Hong Kong Banking Ordinance. The Branch also prepares next five business days LMR projection to manage liquidity.
- Funding diversification – the Branch actively manages the diversification of its funding liabilities by term.
- Core liquidity – the Branch maintains a pool of highly liquid, unencumbered assets that can be readily sold or pledged to secure borrowings under stressed market conditions or due to Branch-specific events.
- Contingency planning – the Branch maintains a liquidity contingency plan that specifies an approach for analyzing and responding to actual and potential liquidity events. The plan outlines an appropriate governance structure for the management and monitoring of liquidity events, processes for effective internal and external communication, and identifies potential counter measures to be considered at various stages of an event.
